

ASSET MANAGEMENT SOFTWARE - PISANI CYCLO

Pisani Cyclo is an intelligent asset management system that uses RFID, barcode and QR code technologies for precise monitoring and control of asset inventories and locations. With a user-friendly and intuitive interface, the software enables process automation and data-based decision-making, optimizing management and reducing operating costs.

▼ MAIN FUNCTIONALITIES:

- ▶ **Advanced Tracking:** Accurately identify asset locations in real time using RFID and barcodes.
- ▶ **Location Control:** Visualize assets distributed across different locations and monitor those in transit.
- ▶ **Asset Classification:** Manage asset types and characteristics (such as small, medium and large boxes) in an organized way.
- ▶ **Dynamic Dashboard:** Track key metrics such as total assets, assets in specific locations, and assets in motion, as well as detailed graphs on the status and types of assets.
- ▶ **Check-in History:** Record and access complete information on asset movements and location updates.
- ▶ **Management of Contained Products:** Control the contents of boxes and packages efficiently.

▼ BENEFITS:

- ▶ **Process Optimization:** Reduce time and operational errors by automating asset tracking and control.
- ▶ **Complete Visibility:** Get access to detailed, centralized information on all your assets.
- ▶ **Flexibility:** Adapt to different types of businesses and needs, such as transportation, logistics and warehousing.
- ▶ **Intuitive Interface:** Facilitates use by operational and administrative teams.

▼ APPLICATIONS:

Ideal for industries, distribution centres and logistics companies looking to maximize control over their assets, guaranteeing traceability, efficiency and operational safety.
